# Table of Contents

## Foreword

- Chapter 1 – Preliminary considerations
  - 1.1. Types of choice
  - 1.2. A decision and its components
  - 1.3. Aligning things on a scale
  - 1.4. Take consequences at face value
  - 1.5. Decisions in a game-theoretic setting
  - 1.6. How to design a game

- Chapter 2 – How games are dealt with
  - 2.1. Games in tree or matrix form
  - 2.2. Dynamic choice: games as trees
  - 2.3. Static choice: games as matrices
  - 2.4. Reasoning on trees
  - 2.5. Reasoning on matrices
  - 2.6. The rationale of rational choice

- Chapter 3 – On games in normal form
  - 3.1. Solving the (matrix) riddle
  - 3.2. Equilibria
  - 3.3. Getting rid of the loop on rationality of actions
  - 3.4. Hypotheses and their revision
  - 3.5. Equilibria as fixpoints of the revision operator
  - 3.6. Unique equilibria?
  - 3.7. The limits of strict games and strict equilibria

---

ISBN 978-88-6453-831-0 (online), CC BY 4.0, 2018 Firenze University Press
3.8. When strictness fails 80
3.9. What if the opponent trembles? 84
3.10. Proper equilibria 99
3.11. Generalizing the analysis to all finite games 105
3.12. Bibliographical note 107

Chapter 4 – Sequential play: games in extensive form 111
4.1. One player after the other 112
4.2. Solving trees, backwards 114
4.3. An abstract, mathematical approach 119
4.4. Preliminary notions and basic notation 119
4.5. Two-person, zero-sum, perfect information games 124
4.6. The model of finite games 124
4.7. Alternative models of finite games 127
4.8. Determinacy of finite games 142
4.9. GRH at work 157
4.10. Bibliographical note 159

Bibliography 163
