Introduction <i>Duccio Pianigiani</i>	3
--	---

PART I FORMAL SYSTEMS

1. From decidability to feasibility	7
1.1 Prerequisites: the language of first-order logic	
1.2 The concept of formal system	
1.3 Models of computation: Turing machines	
1.4 Refinements of the Church-Turing thesis	
1.5 Turing on incomputability and the undecidability	
1.6 Cook and Levin's theorem and the unfeasibility	
2. Abstract views of incompleteness	33
2.1 Models of computation: recursive functions	
2.2 Recursively enumerable sets	
2.3 Hilbert's tenth problem	
2.4 Creative sets and productive sets	
2.5 Guide for further studies: trial-and-error machines	
3. Church's formal system of lambda-calculus	61
3.1 Models of computation: introduction to β -reduction	
3.2 Solvability and head normal forms	
3.3 The simply typed lambda calculus $\lambda_{\times, \rightarrow}$	
3.4 The Curry-Howard-Lambek "computational trinitarianism"	
3.5 Categorical models for untyped lambda calculus	
3.6 Feasibility in lambda calculus: guide for further study	

PART II THE INCOMPLETENESS THEOREMS

4. First and second Gödel's theorems and related results	99
4.1 Definability and representability	

4.2	Arithmetization of metamathematics	
4.3	Syntactic proofs of Gödel's theorems	
4.4	The limit of incompleteness	
4.5	A complete and decidable theory	
4.6	Another look at incompleteness: Tennenbaum's theorem	
4.7	Tennenbaum's and Gödel's theorems	
5.	Second incompleteness theorem: research developments and consequences	121
5.1	Intensionality of the consistency statements	
5.2	Beating incompleteness: Turing's progressions	
5.3	Propositional Provability Logic: classical vs. intuitionistic arithmetic	
5.4	First-order Provability Logic for classical arithmetic	
5.5	Semantic for first-order Modal Logic	
5.6	The quest for consistency proofs: proposal for further study	

PART III PROOF THEORY, MATHEMATICS AND COMPLEXITY

6.	Independent sentences of mathematical character	155
6.1	Skepticism about Gödel's results	
6.2	Ramsey's theorems and the Paris-Harrington theorem	
6.3	The Hydra game	
6.4	Further developments and guide for further study	
7.	Sequent calculus and complexity theory	173
7.1	Gentzen's formalism of sequents	
7.2	Free-cut elimination: a more recent proof	
7.3	Bounded Arithmetic and Polynomial Time Computability	
7.4	Cut-elimination and Polynomial time definable functions	
7.5	Further remarks and guide for further study	
8.	Random sequences, incompleteness and information	205
8.1	What is a random sequence?	
8.2	From Von Mises to Martin-Löf	
8.3	Kolmogorov-Solomonoff-Chaitin's theory and incomputability	
8.4	Incompleteness and randomness	
8.5	Farewell: randomness, incompleteness and physical theories	
	Bibliography	225
	Key concepts	245
